

Assignment 1

Prep by: Prasad Swami_AC

1.1

Code:

```
class PositiveNum{
    public static void main(String args[]){
        int num = 10;
        if(num > 0){
            System.out.println("Positive Number");
        }else{
            System.out.println("Number is not positive");
        }
    }
}
```

1.2

```
class NegativeNum {  
    public static void main(String args[]){  
        int num = -25;  
        if (num < 0){  
            System.out.println("Negative Number");  
        }else{  
            System.out.println("Number is not negative");  
        }  
    }  
}
```

1.3

```
class EvenOdd{
    public static void main(String args[]){
        int num = 9;
        int val = num % 2;
        if (val == 0){
            System.out.println("Even Number");
        }else{
            System.out.println("Odd Number");
        }
    }
}
```

1.4

```
class GoodMorning {  
    public static void main(String args[]){  
        int time = 10;  
        if(5<time && time<12){  
            System.out.println("Good Morning");  
        }  
    }  
}
```

1.5

```
class AreaofSquare {  
    public static void main(String arga[]){  
        int side = 10;  
        System.out.println("Area of Square: "+ (side*side));  
    }  
}
```

1.6

```
class AreaofRegatangle {  
    public static void main(String args[]){  
        int length = 25;  
        int width = 10;  
        System.out.println("Area of Regatangle: " + (length * width));  
    }  
}
```

1.7

```
class LargestNum {  
    public static void main(String args[]){  
        int a = 50;  
        int b = 90;  
        int c = 30;  
        if (a > b & a > c){  
            System.out.println("a is the Largest num");  
        }else if(b > a & b > c){  
            System.out.println("b is the Largest num");  
        }else{  
            System.out.println("c is the Largest num");  
        }  
    }  
}
```
